Statements¹

according to the "*Uniform Requirements for Manuscripts Submitted to Biomedical Journals*" by the International Committee of Medical Journal Editors

1. Conflict-of-Interest Statement

I declare not to have financial or personal relationships that inappropriately influenced my research (dual commitments, competing interests, competing loyalties, etc).

Signature _____

2. Statement of Informed Consent

I declare that the paper does not include any identifying information (e.g., patients' names, initials, records, or hospital numbers), unless the information is essential for scientific purposes and the patient (or owner) gave written informed consent for publication. The informed consent will be indicated in the published article.

Signature _____

3. Statement of Human and Animal Rights

I declare that the procedures followed for the research were in accordance with the ethical standards for human and animal rights approved by the responsible committee of my research and/or clinical institution.

Signature _____

*The first Author should sign the statements on behalf of the other (co)Authors.
The signed form has to be sent by fax to the number 0040 256 277140, or in scanned or pdf format to the e-mail rtcrisrina@yahoo.com*

¹"Uniform Requirements for Manuscripts Submitted to Biomedical Journals" - International Committee of Medical Journal Editors Feb. 2006
„Public trust in the peer review process and the credibility of published articles depend in part on how well conflict of interest is handled during writing, peer review, and editorial decision making. Conflict of interest exists when an author (or the author's institution), reviewer, or editor has financial or personal relationships that inappropriately influence (bias) his or her actions (such relationships are also known as dual commitments, competing interests, or competing loyalties). These relationships vary from those with negligible potential to those with great potential to influence judgment, and not all relationships represent true conflict of interest. The potential for conflict of interest can exist whether or not an individual believes that the relationship affects his or her scientific judgment. Financial relationships (such as employment, consultancies, stock ownership, honoraria, paid expert testimony) are the most easily identifiable conflicts of interest and the most likely to undermine the credibility of the journal, the authors, and of science itself. However, conflicts can occur for other reasons, such as personal relationships, academic competition, and intellectual passion”.
